

JESLY PROSPER

jeslyprosper@gmail.com | linkedin.com/in/jeslyprosper | github.com/JeslyP | Portfolio: jeslyp.github.io/Jesly | London, UK |
British citizen (unrestricted right to work in the UK)

EDUCATION

MS in Analytics (OMSA) Georgia Institute of Technology Computational Data Analytics track	Expected Winter 2027
BEng in Computer Science, 2:1 Honours University of York, United Kingdom Award mark 63. Accredited by the IET and BCS. Relevant coursework: Data Science, Machine Learning & Optimisation, Object Oriented Data Structures & Algorithms, Software & Systems Engineering, Operating Systems, Security & Networking	June 2026

TECHNICAL SKILLS

Programming: Python, SQL (PostgreSQL, MS SQL Server, SQLite), Java, JavaScript/TypeScript
Data & Analytics: Pandas, NumPy, Scikit-learn, PyTorch, statistical analysis, ETL pipeline design, Tableau, advanced Excel, data validation and reconciliation
Engineering & Cloud: Next.js, React, Flask, Supabase, REST APIs, Docker, AWS (Lambda, S3, EC2), Git, CI/CD, automated testing, Agile (Jira)
Certifications: Salesforce Essential Training, Introduction to Business Analysis (IIBA-accredited), FP&A Foundations, CFI Corporate Finance Foundations, Mastercard Cybersecurity Job Simulation, The Legend of Python
Languages: Fluent in English and Haitian Creole

EXPERIENCE

Software Developer, D&K Car Rentals LTD Grand Turk, Turks and Caicos Islands github.com/JeslyP/dk-car-rentals	June 2023 to September 2025
- Designed, built, and solely maintained the full-stack booking, fleet, and financial reporting system for a live business, then migrated it from Python/Flask and SQL Server to Next.js and Supabase while the business kept running. - Built the booking-to-billing workflow: online requests approved into rentals in one click, an invoice for each rental showing the balance due, and every payment recorded by method and date received. - Automated the monthly profit and loss statement, with net profit per vehicle, month-by-month history, and CSV export, replacing manual bookkeeping from paper log sheets. - Analysed booking, revenue, and cost data to identify trends and inefficiencies, turning findings into recommendations that directly informed pricing and fleet decisions. - Protected the financial records with reversible deletions, server-side validation of every entry, and 159 automated tests running in CI before each release.	
Freelance Software Developer, Self-Employed Grand Turk, Turks and Caicos Islands / remote	March 2020 to Present
- Built automated data pipelines, reporting dashboards, and web applications for multiple client businesses, integrating APIs, databases, and flat files into reliable systems. - Implemented data validation and error-handling checks to keep every client deliverable accurate and consistent.	

PROJECTS

NHS Data Science & ETL Pipeline, Python and SQL (University of York) github.com/JeslyP/NHS-Data-Science-Project-	May 2025
Cleansed and normalised six raw NHS operational datasets into a relational SQLite schema, then used a chi-square test, logistic regression, and K-means clustering to explain, predict, and segment appointment no-shows, flagging overfitting rather than reporting an inflated result.	
Autonomous Multi-Robot System, Python and ROS2 (University of York) github.com/JeslyP/AUROS2025	January 2026
- Built an autonomous barrel-collection system for TurtleBot3 robots in Gazebo, coordinated by an 8-state finite state machine with Nav2 navigation and LiDAR obstacle avoidance, in a Dockerised environment. - Designed five test scenarios, each run for 3 hours of simulation time, and analysed the results to validate robustness, achieving 90 to 100% detection accuracy.	
CIFAR-10 Image Classification, PyTorch (University of York) github.com/JeslyP/IMLOCW	May 2025
Built a CNN from scratch with batch normalisation and dropout, trained with Adam and a scheduled learning rate, reaching 81% test accuracy.	
Campus Tycoon, Java Simulation Game (University of York) github.com/JeslyP/CampusTycoonBackend2	December 2024
Built a libGDX simulation game using the Factory pattern and class hierarchies, coordinating a 4-person Agile team with Jira and CI/CD.
