British citizen (unrestricted right to work in the UK)

EDUCATION

MS in Analytics (OMSA) <i>Georgia Institute of Technology Computational Data Analytics track</i>	Expected Winter 2027
BEng in Computer Science, 2:1 Honours <i>University of York, United Kingdom Award mark 63. Relevant coursework: Data Science, Software & Systems Engineering, Human Factors: Technology in Context</i>	June 2026

SKILLS

Business Operations: Process improvement and automation, requirements gathering, business process mapping, data quality checks, cross-functional stakeholder communication
Revenue & Pricing Analysis: Revenue and cost analysis, pricing analysis, revenue recognition principles, monthly financial reporting, KPI tracking, forecasting support
Data & Reporting: Advanced Excel (pivot tables, complex formulas), PowerPoint, SQL, Python (Pandas), Tableau, data validation and reconciliation
AI Tools: Everyday use of Claude and GitHub Copilot for analysis, reporting, and productivity
Languages: Fluent in English and Haitian Creole

EXPERIENCE

Software Developer, D&K Car Rentals LTD <i>Grand Turk, Turks and Caicos Islands github.com/JeslyP/dk-car-rentals</i>	June 2023 to September 2025
- Analysed booking, revenue, and cost data to identify trends and inefficiencies, turning findings into recommendations that directly informed pricing and fleet decisions. - Automated monthly financial reporting and recurring processes, replacing manual work and improving accuracy, consistency, and turnaround. - Designed, built, and solely maintained the booking, fleet, and financial reporting system that linked customer bookings to revenue reporting, and led its migration to a new platform while the business kept running. - Acted as the link between non-technical stakeholders and the system, gathering requirements and turning them into working processes end to end.	
Freelance Software Developer, Self-Employed <i>Grand Turk, Turks and Caicos Islands / remote</i>	March 2020 to Present
- Built automated data pipelines and reporting dashboards for multiple client businesses, bringing together data from APIs, databases, and flat files into reliable reporting. - Implemented data validation and error-handling checks to keep every client deliverable accurate and consistent.	

CERTIFICATIONS

Introduction to Business Analysis, LinkedIn Learning (IIBA-accredited)	Aug 2026
Financial Planning and Analysis (FP&A) Foundations, LinkedIn Learning	Aug 2026
CFI Corporate Finance Foundations Professional Certificate, LinkedIn Learning	Aug 2026

PROJECTS

NHS Data Science & ETL Pipeline (University of York) github.com/JeslyP/NHS-Data-Science-Project-	May 2025
- Cleansed and integrated six raw NHS operational datasets, including billing and insurance records, into a normalised relational database in SQLite. - Identified the drivers of appointment no-shows with a chi-square test and built a logistic regression model to predict them, flagging overfitting rather than reporting an inflated result.
