

JESLY PROSPER

jeslyprosper@gmail.com | [linkedin.com/in/jeslyprosper](https://www.linkedin.com/in/jeslyprosper) | github.com/JeslyP | Portfolio: jeslyp.github.io/Jesly | London, UK |
British citizen (unrestricted right to work in the UK)

Expected graduation: December 2027 | Available full-time in London for a 13 to 17 week internship from May 2027

EDUCATION

MS in Analytics (OMSA)

Expected December 2027

Georgia Institute of Technology | Computational Data Analytics track

BEng in Computer Science, 2:1 Honours

June 2026

University of York, United Kingdom | Award mark 63. Accredited by the IET and BCS. Relevant coursework: Object Oriented Data Structures & Algorithms, Operating Systems, Security & Networking, Software & Systems Engineering, Machine Learning & Optimisation, Autonomous Robots

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript/TypeScript, SQL (T-SQL, PostgreSQL, MSSQL Server)

Frameworks & Libraries: Flask, React, Next.js, ROS2, libGDX, PyTorch, Scikit-learn, Pandas, NumPy

Infrastructure & Tooling: Docker, AWS (Lambda, S3, EC2), Git, CI/CD pipelines, Supabase, Snowflake, REST API design, automated testing, Agile (Jira)

Computer Science: Data structures and algorithms, object-oriented design patterns, finite state machines, machine learning (CNNs, classification, clustering)

Certifications: Cybersecurity Job Simulation (Mastercard, Forage), The Legend of Python (Codédex), Introduction to Business Analysis (LinkedIn Learning, IIBA-accredited)

Languages: Fluent in English and Haitian Creole

EXPERIENCE

Software Developer, D&K Car Rentals LTD

June 2023 to September 2025

Grand Turk, Turks and Caicos Islands | github.com/JeslyP/dk-car-rentals

- Designed, built, and solely maintained a full-stack booking, fleet, and financial reporting system for a live commercial business, owning its full lifecycle from design to production support.
- Migrated the platform from Python/Flask and SQL Server to Next.js and Supabase while keeping the business running.
- Automated monthly financial reporting and recurring processes, replacing manual work and improving accuracy, consistency, and turnaround.
- Gathered requirements directly from non-technical stakeholders and delivered working solutions end to end.

Freelance Software Developer, Self-Employed

March 2020 to Present

Grand Turk, Turks and Caicos Islands / remote

- Built automated data pipelines, dashboards, and web applications for multiple client businesses, integrating APIs, databases, and flat files into reliable systems.
- Implemented data validation and error-handling frameworks to keep every client deliverable accurate and consistent.

PROJECTS

Autonomous Multi-Robot System, Python and ROS2 (University of York)

January 2026

github.com/JeslyP/AUROS2025

- Built an autonomous barrel-collection system for TurtleBot3 robots in Gazebo, coordinated by an 8-state finite state machine, in a Dockerised development environment.
- Used the Nav2 stack for patrol navigation, LiDAR obstacle sectoring for real-time avoidance, and a proportional controller for visual servoing to approach targets.
- Added hysteresis-based target selection to stop oscillation between detections, plus a timeout and escape manoeuvre so robots recover automatically when stuck.
- Designed five test scenarios including sensor noise and a full-complexity stress test, each run for 3 hours of simulation time, achieving 90 to 100% detection accuracy.

Campus Tycoon, Java Simulation Game (University of York)

December 2024

github.com/JeslyP/CampusTycoonBackend2

- Built a libGDX city simulation game in Java, using the Factory pattern for building types and inheritance and polymorphism across building and event class hierarchies.
- Coordinated a 4-person Agile team with Jira and delivered on time with CI/CD integration.

CIFAR-10 Image Classification, PyTorch (University of York)

May 2025

github.com/JeslyP/IMLOCW

- Built a CNN from scratch with three convolutional blocks, batch normalisation, and dropout, trained with Adam and a scheduled learning rate, reaching 81% test accuracy.

NHS Data Science & ETL Pipeline, Python and SQL (University of York)

May 2025

github.com/JeslyP/NHS-Data-Science-Project

- Normalised six raw NHS datasets into a relational SQLite schema, then built a logistic regression model to predict appointment no-shows and K-means clustering to segment patients.
