JESLY PROSPER

jeslyprosper@gmail.com | linkedin.com/in/jeslyprosper | github.com/JeslyP | Portfolio: jeslyp.github.io/Jesly | London, UK |
British citizen (unrestricted right to work in the UK)

EDUCATION

MS in Analytics (OMSA) **Expected Winter 2027**
Georgia Institute of Technology | Computational Data Analytics track

BEng in Computer Science, 2:1 Honours **June 2026**
University of York, United Kingdom | Award mark 63. Relevant coursework: Data Science, Machine Learning & Optimisation, Software & Systems Engineering

FINANCE CERTIFICATIONS

CFI Corporate Finance Foundations Professional Certificate, LinkedIn Learning **Aug 2026**
Corporate finance, financial statement analysis, Microsoft Excel

Financial Planning and Analysis (FP&A) Foundations, LinkedIn Learning **Aug 2026**
Financial planning, financial analysis, budget management

Introduction to Business Analysis, LinkedIn Learning (IIBA-accredited) **Aug 2026**

SKILLS

Finance & Reporting: Revenue and cost analysis, monthly financial reporting, financial statement analysis, KPI tracking, forecasting and budgeting support

Excel & Data: Advanced Excel (pivot tables, complex formulas), SQL (T-SQL, MS SQL Server, PostgreSQL), Python (Pandas, NumPy), Tableau, data cleansing, validation and reconciliation

Systems & Process Improvement: Process automation, system migration, automated testing, requirements gathering, business process mapping, Agile delivery (Jira)

Languages: Fluent in English and Haitian Creole

EXPERIENCE

Software Developer, D&K Car Rentals LTD **June 2023 to September 2025**
Grand Turk, Turks and Caicos Islands

- Analysed booking revenue and cost data to identify trends and inefficiencies, turning findings into recommendations that directly informed pricing and fleet decisions.
- Automated monthly financial reporting and recurring processes, replacing manual work and improving the accuracy, consistency, and turnaround of monthly figures.
- Built and solely maintained the company's booking, fleet, and financial reporting system, and led its migration from Python/Flask and SQL Server to Next.js and Supabase while the business kept running.
- Worked directly with non-technical stakeholders to gather requirements and turn technical work into decisions they acted on, owning each change from design through to production support.

Freelance Software Developer, Self-Employed **March 2020 to Present**
Grand Turk, Turks and Caicos Islands / remote

- Built automated data pipelines and reporting dashboards for multiple client businesses, bringing together data from APIs, databases, and flat files into reliable reporting.
- Implemented data validation and error-handling checks to keep every client deliverable accurate and consistent.

PROJECTS

NHS Data Science & ETL Pipeline (University of York) **May 2025**
github.com/JeslyP/NHS-Data-Science-Project-

- Cleansed and integrated six raw NHS operational datasets, including billing and insurance records, into a normalised relational database in SQLite.
- Tested the drivers of appointment cancellations with chi-square tests and logistic regression, and reported honestly that no factor was predictive (ROC-AUC 0.50) rather than overstating a weak model.
