JESLY PROSPER

jeslyprosper@gmail.com | linkedin.com/in/jeslyprosper | github.com/JeslyP | Portfolio: jeslyp.github.io/Jesly | London, UK |
British citizen (unrestricted right to work in the UK)

TECHNICAL SKILLS

Data Analysis & SQL: SQL (T-SQL, MS SQL Server, PostgreSQL, SQLite), data cleansing, validation and reconciliation, relational data modelling, ETL pipeline design
Reporting & Visualisation: Tableau, advanced Excel (pivot tables, complex formulas), reporting dashboards, KPI tracking, management and financial reporting
Statistical Analysis: Python (Pandas, NumPy, Scikit-learn), chi-square testing, logistic regression, K-Means clustering, PyTorch
Business Analysis: Requirements gathering, stakeholder communication, process mapping, revenue and cost analysis, forecasting
Engineering & Delivery: Git, Docker, AWS, Snowflake, REST APIs, CI/CD, Agile delivery (Jira)
Languages: Fluent in English and Haitian Creole

EDUCATION

MS in Analytics (OMSA) **Expected Winter 2027**
Georgia Institute of Technology | Computational Data Analytics track

BEng in Computer Science, 2:1 Honours **June 2026**
University of York, United Kingdom | Award mark 63. Accredited by the IET and BCS. Relevant coursework: Data Science & Machine Learning, Software & Systems Engineering, Object Oriented Data Structures & Algorithms

WORK EXPERIENCE

Software Developer, D&K Car Rentals LTD **June 2023 to September 2025**
Grand Turk, Turks and Caicos Islands | github.com/JeslyP/dk-car-rentals

- Analysed booking, revenue, and cost data to identify trends and inefficiencies, turning findings into recommendations that directly informed pricing and fleet decisions.
- Automated monthly financial reporting and recurring processes, replacing manual work and improving accuracy, consistency, and turnaround.
- Designed, built, and solely maintained the booking, fleet, and financial reporting system on a SQL Server database (Python/Flask, later migrated to Next.js/Supabase) for a live commercial business.
- Gathered requirements directly from non-technical stakeholders and delivered working solutions end to end, owning the system from design to production support.

Freelance Software Developer, Self-Employed **March 2020 to Present**
Grand Turk, Turks and Caicos Islands / remote

- Built automated data pipelines and reporting dashboards for multiple client businesses, integrating data from APIs, databases, and flat files into reliable reporting.
- Implemented data validation and error-handling checks to keep every client deliverable accurate and consistent.

PROJECTS

NHS Data Science & ETL Pipeline (University of York) **May 2025**
github.com/JeslyP/NHS-Data-Science-Project-

- Cleansed and integrated six raw NHS operational datasets (appointments, billing, insurance, prescriptions, surgery, test records) into a normalised relational schema in SQLite, documented with an ER diagram.
- Tested what drives missed appointments with chi-square tests and a logistic regression model, and reported honestly that no factor predicted cancellation (ROC-AUC 0.50); used K-means clustering to find that 2% of patients account for 15% of appointments.

Autonomous Robotics System (University of York) **January 2026**
github.com/JeslyP/AUROJES2025

- Built an autonomous multi-robot collection system in Python and ROS2 (Gazebo, Docker), coordinated by an 8-state finite state machine with Nav2 navigation and LiDAR obstacle avoidance.
- Designed five test scenarios, each run for 3 hours of simulation time, and analysed the results to validate robustness, achieving 90 to 100% detection accuracy.

CERTIFICATIONS

Introduction to Business Analysis, LinkedIn Learning (IIBA-accredited) **Aug 2026**
Financial Planning and Analysis (FP&A) Foundations, LinkedIn Learning **Aug 2026**
CFI Corporate Finance Foundations Professional Certificate, LinkedIn Learning **Aug 2026**
Cybersecurity Job Simulation, Mastercard (Forage) **Feb 2025**
The Legend of Python, Codédex **Feb 2025**
