JESLY PROSPER

jeslyprosper@gmail.com | linkedin.com/in/jeslyprosper | github.com/JeslyP | Portfolio: jeslyp.github.io/Jesly | London, UK |
British citizen (unrestricted right to work in the UK)

EDUCATION

BEng in Computer Science, 2:1 Honours **June 2026**
University of York, United Kingdom | Award mark 63. Relevant coursework: Data Science, Machine Learning & Optimisation, Software & Systems Engineering, Human-Computer Interaction

MS in Analytics (OMSA) **Expected Winter 2027**
Georgia Institute of Technology | Computational Data Analytics track

SKILLS

Analytics & SQL: SQL (PostgreSQL, MS SQL Server, SQLite), Python (Pandas, NumPy, Scikit-learn), statistical analysis (chi-square testing, logistic regression, K-means clustering), ETL pipeline design, data validation and reconciliation
Visualisation & Storytelling: Python, Tableau, advanced Excel, and PowerPoint for dashboards, reports, and presentations to technical and non-technical audiences
AI & Automation: Everyday use of Claude and GitHub Copilot to speed up analysis code, plus automation of recurring reporting and day-to-day processes
Commercial Analysis: Revenue, cost, and pricing analysis, KPI tracking, forecasting support, requirements gathering, stakeholder communication
Data Platforms & Engineering: Supabase, Snowflake, AWS, Git, CI/CD, Next.js
Certifications: Introduction to Business Analysis (IIBA-accredited), FP&A Foundations, CFI Corporate Finance Foundations, Salesforce Essential Training, The Legend of Python
Languages: Fluent in English and Haitian Creole

EXPERIENCE

Software Developer, D&K Car Rentals LTD **June 2023 to September 2025**
Grand Turk, Turks and Caicos Islands | github.com/JeslyP/dk-car-rentals

- Analysed booking, revenue, and cost data to answer commercial questions and identify inefficiencies, turning findings into recommendations that directly shaped pricing and fleet decisions.
- Defined and automated the business's monthly profit and loss reporting, with profit per vehicle, month-by-month history, and CSV export, replacing manual bookkeeping from paper log sheets.
- Built and solely maintained the booking, fleet, and financial reporting system behind that analysis, migrating it from Python/Flask and SQL Server to Next.js and Supabase while the business kept running.
- Protected data accuracy with server-side validation of every entry, reversible deletions, and 159 automated tests running before each release.
- Explained findings and system changes to non-technical stakeholders, and turned their needs into working tools and reports.

Freelance Software Developer, Self-Employed **March 2020 to Present**
Grand Turk, Turks and Caicos Islands / remote

- Built automated data pipelines and reporting dashboards for multiple client businesses, bringing together data from APIs, databases, and flat files into reliable reporting.
- Implemented data validation and error-handling checks to keep every client deliverable accurate and consistent.

PROJECTS

NHS Data Science & ETL Pipeline, Python and SQL (University of York) **May 2025**
github.com/JeslyP/NHS-Data-Science-Project-

- Structured six raw NHS operational datasets into a normalised relational schema in SQLite, documented with an ER diagram, to answer why patients miss appointments.
- Tested what drives missed appointments with chi-square tests and a logistic regression model, and reported honestly that no factor predicted cancellation (ROC-AUC 0.50); used K-means clustering to find that 2% of patients account for 15% of appointments.

Autonomous Multi-Robot System, Python and ROS2 (University of York) **January 2026**
github.com/JeslyP/AUROJES2025

- Designed five test scenarios for an autonomous multi-robot system, each run for 3 hours of simulation time, and analysed the results to validate robustness, achieving 90 to 100% detection accuracy.

CIFAR-10 Image Classification, PyTorch (University of York) **May 2025**
github.com/JeslyP/IMLOCW

- Built a CNN from scratch, achieving 79% test accuracy on a 40,000/10,000/10,000 train/validation/test split.
